Note

3 tables include data from the following sources: European Commission, European Parliament and IPEX. In none of those sources a complete information is available on the result of subsidiarity scrutiny mechanism and each of them is based on a different methodology, i.e.:

- in IPEX reasoned opinion relates to dossier (procedure), so for the procedures including more than one legislative proposal the result needs **an additional checking** - no automatic statistics available in such a case;
(New functionality which allows for retrieval of the ROs **sent** in a given period was introduced into IPEX in 2015.)
- the EC gives the **number of reasoned opinions** which were **sent to the EC in a given year** – data from the EC reports, no database
- the EP gives the **number of** transmitted to the EP **reasoned opinions split by years of COM documents** to which they relate to (date of EU document decides, not the date of transmission of a RO)- data from the EP tables, no database available
